

Figure 1: A multi-panel plot showing the relationship between the Gene List Index (0 to 17824) and various metrics. The top panel shows a blue line representing a metric that fluctuates, crosses a dashed horizontal line at index 9125 (labeled "Zero crossing at 9125"), and peaks at index 15925 (labeled "Peak at 15925"). The middle panel shows vertical black lines representing gene sets. The bottom panel shows a green area representing the "clus4" gene set, which is labeled "clus4" and "NON.clus4".
