

Figure 1 displays a multi-panel plot showing gene set enrichment analysis results. The top panel is a line graph of the enrichment score (ES) across the gene list index (0 to 17,259). The ES starts at 0, decreases to a minimum of -0.25 at index 14,513, and then increases to 0 at index 8,873. A horizontal dashed line is at ES = 0. The middle panel shows a barcode of gene set hits, with a dense cluster of hits between indices 14,513 and 17,259. The bottom panel is a green area plot showing the distribution of gene set hits, with a peak at index 14,513. The plot is labeled "clus3" and "NON.clus3".
