

Figure 1: A multi-panel plot showing the distribution of gene lists. The top panel is a line graph of the number of clusters (y-axis, 0 to 10) versus the Gene List Index (x-axis, 0 to 18307). The line starts at 10, drops sharply to 1 by index 1000, and then remains at 1 until index 18307. A vertical dashed line at index 8609 is labeled "Zero crossing at 8609". A vertical dotted line at index 15573 is labeled "Peak at 15573". The bottom panel is a bar chart showing the number of gene lists (y-axis, 0 to 10) versus the Gene List Index (x-axis, 0 to 18307). The bars are green and show a sharp peak at index 15573. The area under the bars is shaded green. The label "clus3" is at the bottom left and "NON.clus3" is at the bottom right.
