

Figure 1: A multi-panel plot showing the distribution of gene lists. The top panel is a line graph of the number of clusters (y-axis, 0.0 to 0.5) versus the Gene List Index (x-axis, 0 to 15,000). A blue line shows the distribution, with a 'Zero crossing at 8609' marked by a green dotted line and a 'Peak at 15573' marked by a blue dotted line. The bottom panel shows a green shaded area representing the distribution of gene lists, with labels 'clus3' and 'NON.clus3' indicating different clusters. The x-axis is labeled 'Gene List Index' and 'Number of genes: 18307 (in list), 109 (in gene set)'.
